

CENTIPEDEGRASS LAWN CALENDAR

MOWING HEIGHT:

1" - 1 1/2" This is THE most important practice for a healthy centipede grass lawn.

WATER:

1 inch per week if no rainfall

FERTILIZATION:

Use centipede fertilizer twice per year. Follow label rate. Wait to fertilize until 100% green.

IDEAL pH RANGE: 5.0- 6.5

Lime is rarely needed.

AERATION:

Use a core aerator during active growth season.

DETHATCH: If thatch exceeds .5 inch deep use a vertical mower with blades 1" apart and go over lawn only once. Topdressing with .25" soil is most effective.

SEEDING - NEW LAWN:

1/4 - 1/2 lb. Best. per 1000 square feet

OVERSEEDING - ESTABLISHED LAWN:

Overseeding centipede with ryegrass is not recommended.

SODDING

500 sq. ft. per pallet

WEED CONTROL:

Read product label carefully to determine which weeds are controlled and on which grasses the product can be used.

Spring pre-emergent* (prevents crabgrass, goosegrass and other summer weed seeds from sprouting)

Broadleaf post-emergent* (spot spray to kill broadleaved plants like chickweed, wild violet, dandelion, wild onion, etc)

Grassy weed post-emergent * (kills grassy weeds like crabgrass, dallisgrass, etc. Do not apply to drought-stressed Centipede.)

Winter pre-emergent* (prevents chickweed and other winter weed seeds from sprouting)
